

# Which animals leave these signs?

Slug or snail? Which is which?

Who does this belong to?

What are these?  
What will you find in them?

# Who do these tracks belong to?

hind foot

front foot

# Who's nibbled these hazelnuts?

## Clues:

- Dormice leave a smooth, round hole in the side of the nut.
- Wood mice leave tooth marks on the nut and the hole is sometime ragged in shape.
- Nuthatches jam hazelnuts into crevices in tree bark, so they can hammer them more easily.
